W02 Reflection

> As we stand atop any peak, let us enjoy the moment of satisfaction in the present. Look at the remarkable view and the progress we have made. Then turn around to see what new peaks are now in sight and set a course to climb higher in the future. When we do this, we see clearly how the achievement of one goal paves the way to higher achievement in the future.
>
> Looking back and contemplating the sacrifice and hard work that were required to achieve past goals, we gain confidence and determination that we can do more and climb even higher.
>
> –Elder Robert D. Hales, *Return*, p. 372

Instructions

One of the outcomes of this course is for you to not only learn to write code, but also to develop confidence in learning new programming skills. To this end, it is important to periodically reflect back on your progress and consider how your learning is going.

As part of this reflection, at the end of each week, you will answer a question that has you reflect on some aspect of your learning that week. Then, you'll also have a chance to bring up anything you are feeling nervous about. Finally, if you're feeling completely overwhelmed, this is a chance to share that with the instructor as well.

Your instructor will review these reflections and use that to respond to the class as a whole about topics that may need more help.

You will receive full credit for any submission, but to increase your personal development, please respond thoughtfully.

Submission

- [Return to Canvas](#) to submit your reflection.
